Summary

Computer Science student with industry experience developing AI systems and full-stack applications, alongside technical leadership across student organizations and award-winning hackathon teams. Seeking AI/ML engineering roles focused on building production-ready intelligent systems.

Education

University of the Philippines Visayas

BS in Computer Science

Iloilo, Philippines

Aug 2024 – present

- Cumulative GWA: 1.15 (President's Lister)
- Relevant Coursework: Software Engineering, Web Programming, Database Systems

Experience

AI Automation Engineer

June 2026 – present

MorpheLabs

- Building production AI agents using modern LLM orchestration frameworks for enterprise applications.
- Developing enterprise automation workflows with n8n, integrating AI services, APIs, and business systems.

Backend AI Engineer

July 2026 – present

FlyRank AI

- Building backend workflows with hybrid retrieval, structured LLM outputs, and RAG pipelines.
- Designing and maintaining evaluation pipelines to assess retrieval quality and structured output correctness.

Web Developer (Branding & Creative)

Jan 2026 – May 2026

UP Data Science Society

- Contributed to the planning and implementation of the organization's website during its initial development.
- Developed a Spotify Wrapped-style data visualization website featured by the organization, reaching 1,000+ viewers.

Lead Web Developer

Sept 2025 – May 2026

Pagbutlak — Student Publication, College of Arts and Sciences

- Designed system architecture and implemented CMS, authentication, role-based access control, and media uploads for 50+ editorial users.
- Built content migration pipeline for transitioning 300+ legacy articles from a WordPress system to a modern full-stack architecture.

Web Developer

Sept 2024 – Sept 2025

Komsai.Org — Computer Science Student Organization

- Redesigned and rebuilt organization website from legacy implementation to a modern web stack.
- Improved content structure and maintainability, reducing update overhead for 10+ maintainers.

Projects

Iskommerce 📄

Mar 2026 – May 2026

University-based C2C marketplace platform modeling informal student trading behavior in a structured system.

- Led a team through a 3-month Agile development cycle to build a full-stack marketplace.
- Implemented real-time messaging and notifications using WebSockets.

Project HERMES 📄

Mar 2026 – Apr 2026

Disaster response communication system using AI-assisted chat workflows and multi-platform messaging integration.

- Led a 5-person team, owning system architecture, sprint planning, task allocation, and code review.
- Built AI chatbot workflows for incident reporting and information dissemination across 3 messaging platforms.
- Integrated Messenger and Telegram APIs for multi-channel communication.

Manobela 📄 (TrackTech Hackathon Winner)

Dec 2025 – Feb 2026

Driver monitoring system using real-time computer vision for in-vehicle safety.

- Led a 5-person team and delivered a deployed system in a 3-week sprint.
- Integrated YOLO and MediaPipe-based computer vision pipeline under constrained mobile environments.

- Designed real-time video processing system using WebRTC for live streaming and analysis.

Aklish

Jan 2025 – July 2025

Crowdsourced Aklanon-English translation platform with NLP tools for an underserved Philippine language.

- Implemented dictionary-based spellchecker and stemming system for Aklanon language processing.
- Conducted user testing with 100+ native speakers and iterated on UX improvements.

Awards

Quantum Computing and Cybersecurity Hackathon 2026 (QCSP)

June 2026

1st Place — Philippines' first quantum-themed cybersecurity hackathon, specialized in Classical-Quantum challenges.

Hack4Gov National CTF 2025 (DICT & CERT-PH)

Oct 2025

1st Runner-Up (Team) and 2nd Runner-Up (Individual) — national cybersecurity competition, specialized in web security.

Skills

Programming Languages: Python, TypeScript, JavaScript, Java

AI / ML: PyTorch, TensorFlow, Scikit-learn, Pandas, LangChain, LangGraph, vector databases

Frontend: React, Next.js, React Native, Expo, Astro, TailwindCSS

Backend: FastAPI, Django, Express.js, NestJS

Databases: PostgreSQL, Supabase, Firebase

Tools: n8n, Git, Docker, CI/CD, Vercel, Render, Railway
