Summary

Computer Science student with industry experience developing AI systems and full-stack applications, alongside technical leadership across student organizations and award-winning hackathon teams. Seeking AI/ML engineering roles focused on building production-ready intelligent systems.

Education

University of the Philippines Visayas

BS in Computer Science

Iloilo, Philippines

Aug 2024 – present

- Cumulative GWA: 1.15/1.00 (President's Lister; 1.00 is the highest possible grade)
- Relevant Coursework: Software Engineering, Web Programming, Database Systems

Experience

AI Automation Engineer

June 2026 – present

MorpheLabs

- Replaced a real estate manual booking form with an AI voice agent and n8n automation, handling conflict checks, calendar sync, and rescheduling for every booking.
- Redesigned an event photo platform's matching pipeline from one-time selfie lookups to persistent face clustering, moving recognition in-house (DeepFace, pgvector) for 1,000+ attendees.

Backend AI Engineer

July 2026 – present

FlyRank AI

- Built a usage metering and billing engine with idempotent event recording and Stripe webhook sync, eliminating duplicate charges under request retries.
- Built an AI image-matching engine combining vision-model tagging and semantic embeddings to catch incorrect image-to-article pairings, benchmarked on a labeled eval set.

Web Developer (Branding & Creative)

Jan 2026 – May 2026

UP Data Science Society

- Co-planned and built the organization's website from initial development through launch, shipping the branding and creative team's first production site.
- Built a Spotify Wrapped-style personal-data visualization site featured by the organization, reaching 1,000+ viewers.

Lead Web Developer

Sept 2025 – May 2026

Pagbutlak — Student Publication, College of Arts and Sciences

- Architected a CMS with authentication, role-based access control, and media uploads, replacing WordPress for 50+ editorial users.
- Built a migration pipeline that moved 300+ legacy articles from WordPress into the new architecture.

Web Developer

Sept 2024 – Sept 2025

Komsai.Org — Computer Science Student Organization

- Rebuilt the organization's website from a legacy implementation to a modern web stack.
- Restructured content organization across the site, reducing update overhead for 10+ maintainers.

Projects

Iskommerce

Mar 2026 – May 2026

University-based C2C marketplace platform modeling informal student trading behavior in a structured system.

- Led a team through a 3-month Agile cycle to ship a full-stack C2C marketplace with a modular monolith architecture.
- Built WebSocket-based messaging and notifications, keeping buyer-seller conversations tied to each listing and users updated in real time.
- Built semantic search, similar-listing recommendations, and a personalized homepage on pgvector and local embeddings.

Project HERMES

Mar 2026 – Apr 2026

Disaster response communication system using AI-assisted chat workflows and multi-platform messaging integration.

- Led a 5-person team as system architect, owning sprint planning, task allocation, and code review to ship a disaster-response coordination platform in 1 month.
- Designed a hybrid AI/rule-based chatbot that classifies intent and extracts incident data from freeform reports across Messenger and Telegram, with human-reviewed validation.
- Built a responder dashboard with feed, kanban, and map views, adding Supabase Realtime for instant updates and an installable PWA with offline caching.

Manobela (TrackTech Hackathon Winner)

Dec 2025 – Feb 2026

Driver monitoring system using real-time computer vision for in-vehicle safety.

- Led a 5-person team to deliver a deployed driver-monitoring system in a 3-week hackathon sprint, winning 1st place among 8 teams at TrackTech Hackathon 2026.
- Built a real-time computer vision pipeline (MediaPipe, YOLOv8, OpenCV, ONNX Runtime) detecting drowsiness, distraction, and phone use via eye-aspect-ratio, PERCLOS, and gaze-tracking models.
- Designed a WebRTC streaming architecture that offloads inference to the backend, keeping the mobile app lightweight for real-time alerts.

Aklish

Jan 2025 – July 2025

Crowdsourced Aklanon-English translation platform with NLP tools for an underserved Philippine language.

- Encoded 5,000+ dictionary entries from a printed source into a crowdsourced Aklanon-English dictionary.
- Built a spellchecker combining SymSpellPy, LemmInflect, and a custom-built Aklanon stemmer (AklStemmer) to catch inflected-word errors in both languages.
- Conducted user testing with 100+ native speakers and iterated on UX improvements based on their feedback.

Awards

Quantum Computing and Cybersecurity Hackathon 2026 (QCSP)

June 2026

1st Place — Philippines' first quantum-themed cybersecurity hackathon, specialized in Classical-Quantum challenges.

Hack4Gov National CTF 2025 (DICT & CERT-PH)

Oct 2025

1st Runner-Up (Team) and 2nd Runner-Up (Individual) — national cybersecurity competition, specialized in web security.

Skills

Programming Languages: Python, TypeScript, JavaScript, Java

AI / ML: PyTorch, TensorFlow, Scikit-learn, Pandas, LangChain, LangGraph, RAG pipelines, vector databases (pgvector), LLM evaluation

Frontend: React, Next.js, React Native, Expo, Astro, TailwindCSS

Backend: FastAPI, Django, Express.js, NestJS

Databases: PostgreSQL, Supabase, Firebase

Tools: n8n, Git, Docker, CI/CD, Stripe, Vercel, Render, Railway
