Summary

Computer Science student building full-stack systems and applied machine learning applications. Focused on designing and implementing deployable software systems with data-driven components. Experience includes full-stack web and mobile applications, real-time systems, and open-source software.

Education

University of the Philippines Visayas

BS in Computer Science

Iloilo, Philippines

Aug 2024 – present

- Cumulative GWA: 1.15 (President's Lister)
- Relevant Coursework: Software Engineering, Web Programming, Database Systems

Experience

Web Developer (Branding & Creative)

Jan 2026 – present

UP Data Science Society

Contributed to web development and data-driven creative initiatives for the organization.

- Supported early-stage development of organization website.
- Developed a Spotify Wrapped-inspired data visualization project featured on official organization social media.

Lead Web Developer

Sept 2025 – present

Pagbutlak — Student Publication, College of Arts and Sciences

Leading development of a publication platform replacing a legacy WordPress system with a full-stack architecture.

- Designed system architecture and implemented CMS, authentication, user roles, and media uploads.
- Established content migration strategy and editorial workflows to ensure smooth transition from the legacy site.

Web Developer

Sept 2024 – present

Komsai.Org — Computer Science Student Organization

Led full redesign and development of organization website using modern web technologies.

- Redesigned and rebuilt organization website from legacy implementation to modern web stack.
- Improved content structure and maintainability of student organization platform.

Projects

Manobela 📄

Jan 2026 – Feb 2026

Driver monitoring mobile app using real-time computer vision for in-vehicle safety.

- Integrated YOLO and MediaPipe-based **computer vision** pipeline for real-time inference in constrained environments.
- Designed and implemented mobile real-time video processing system using WebRTC.
- Won champion at the TrackTech Hackathon 2026, outperforming 7 teams.

Project HERMES 📄

Mar 2026 – Apr 2026

Disaster response communication system using AI-assisted chat workflows and multi-platform messaging integration.

- Led a 5-person team and owned system architecture, sprint planning, task allocation, and code review.
- Built **AI chatbot** workflows using prompt-based orchestration for incident reporting and information dissemination.
- Integrated Messenger and Telegram APIs for multi-channel communication systems.

Iskommerce 📄

Mar 2026 – May 2026

University-based C2C marketplace platform modeling informal student trading behavior in a structured system.

- Led a team to build a full-stack marketplace using Next.js, NestJS, and PostgreSQL with transaction and review systems.
- Implemented **real-time messaging** and notifications using WebSockets.

MiaGo 📄

Mar 2026 – May 2026

Community-based food delivery system connecting customers, vendors, and riders through structured workflows.

- Led a team to build a full-stack platform using React, Express, TypeScript, and PostgreSQL.
- Implemented role-based access control (**RBAC**) across customer, vendor, and rider workflows.

renux 📄

2025 – 2025

Terminal-based bulk file renaming tool distributed as a Python CLI application.

- Built and published a Python CLI tool on PyPI, reaching **5000+ downloads**.
- Maintained open-source repository with iterative improvements and feature enhancements.

UniGlyphs

2025 – 2025

Browser extension for inline text formatting across web applications.

- Built **cross-platform extension** with dynamic UI injection for text editing workflows.
- Designed a cross-site interaction system for applying text formatting within any web input field.

Aklish

2024 – 2025

Crowdsourced Aklanon-English translation platform with language processing tools.

- Implemented dictionary-based **spellchecker** for translation accuracy improvement.
- Developed stemming system for Aklanon language processing.
- Conducted user testing with 60 native speakers and iterated on UX improvements.

TagLID

2024 – 2024

Word-level language identification tool for Tagalog-English code-switched text.

- Built Python-based language identification system with stemming support for Tagalog words.
- **Scraped** dictionary data using BeautifulSoup4 for dataset construction.
- Analyzed 100 survey responses to compute code-switching frequency.

Awards

Hack4Gov National CTF 2025 (DICT & CERT-PH)

Region VI, Philippines

Placed 1st Runner-Up in the Team Category and 2nd Runner-Up in the Individual Category of the regional cybersecurity competition.

Oct 2025

- Competed across web exploitation, OSINT, digital forensics, cryptography, reverse engineering, and network security challenges.
- Solved challenges involving modern web application vulnerabilities, including a Next.js middleware authorization bypass scenario.

Skills

Programming Languages: Python, TypeScript, JavaScript, Java, PHP, SQL

Frontend and Mobile: React, Next.js, React Native, Expo, Astro, TailwindCSS, HTML5

Backend: NestJS, Express.js, Django, FastAPI, WebSockets, REST APIs

Databases: PostgreSQL, Supabase, Firebase, schema design

Machine Learning and Data: Pandas, Scikit-learn, TensorFlow, PyTorch

Tools and Deployment: Git, Docker, CI/CD, Vercel, Netlify, Render, Railway

Languages: English (Professional working proficiency), Tagalog (Professional working proficiency)
