Summary

A Computer Science student who builds full-stack apps with machine learning. I aim to create tools that people actually use and find useful. I also value accessible software and contribute to open-source whenever I can.

Education

BS Computer Science, University of the Philippines Visayas Miagao, Iloilo, Philippines
• Current Cumulative GWA: 1.15 (President's Lister) Aug 2024 – present
• Relevant Coursework: Web Programming, Database Systems

Experience

Lead Web Developer, Pagbutlak — Student Publication of College of Arts and Sciences Sept 2025 – present
Leading the development of a new publication website to replace a legacy WordPress platform with a modern system.
• Designed the project architecture and tech stack with Next.js, PayloadCMS, and TailwindCSS.
• Established content migration strategy and editorial workflows to ensure smooth transition from the legacy site.

Branding and Creative Fellow, UP Data Science Society Jan 2026 – present
Supporting the society's branding and creative initiatives, with a focus on website development.
• Contributed in the early-stage development of the organization's website.
• Built a Spotify Wrapped-inspired data science website that was featured by the organization.

Web Developer, Komsai.Org — Organization for Computer Science Students Sept 2024 – present
Developing the organization's website using modern web technologies, streamlining content updates and improving the experience for student members.

Projects

Manobela [🔗](#) Jan 2026 – Feb 2026
A driver monitoring mobile app using computer vision
• Led a team of five to build a **mobile app** with real-time WebRTC video processing using **computer vision**.
• Won **champion** at the [TrackTech Hackathon](#) 2026 - CPU CSS, outperforming 7 teams.

Project HERMES [🔗](#) Mar 2026 – Apr 2026
DRRM communication control center through AI-powered chatbots
• Built an AI **chatbot** to automate incident reporting and information dissemination.
• Integrated with Messenger and Telegram APIs.

Iskommerce [🔗](#) Mar 2026 – May 2026
University-only C2C e-commerce marketplace platform for structured buying, selling, and exchange within an academic community.
• Built a full-stack C2C e-commerce marketplace with transactions and reviews using Next.js, NestJS, and PostgreSQL.
• Implemented real-time messaging and notifications using **WebSockets**.

MiaGo [🔗](#) Mar 2026 – May 2026
Community-based food delivery platform connecting customers, vendors, and freelance riders through an ordering and dispatch system.
• Built a full-stack food delivery platform using React, Express, TypeScript, and PostgreSQL.
• Designed an **RBAC** system for customers, riders, and vendors with structured order and delivery lifecycle management.

renux [🔗](#) 2025 – 2025
Terminal-based bulk file renamer with a user-friendly TUI.
• Packaged as an installable Python TUI application, accessible to users on all platforms.
• Achieved **3,000+ downloads** on [PyPI](#) and 30+ stars on [GitHub](#).

UniGlyphs [🔗](#) 2025 – 2025
Browser extension for formatting text on any website using an inline toolbar.
• Developed a flexible **browser extension** supporting complex interactions on any website input.
• Gained 20+ users on [Chrome Web Store](#).

Aklish [🔗](#) 2024 – 2025

A web app for crowdsourcing Aklanon–English translations

- Implemented a dictionary-based Aklanon **spellchecker**, improving translation accuracy.
- Developed an Aklanon word **stemming** library, enhancing spell-check precision.
- Conducted user testing with 30 native speakers and iteratively improved UX, resulting in increased usability.

TagLID [↗](#)

2024 – 2024

A word-level Language Identification (LID) tool for Tagalog–English (Taglish) text

- Created a **Python library** for Tagalog word stemming to improve Tagalog language detection for inflected words.
- **Scraped** from Tagalog and English dictionaries using BeautifulSoup4 to generate frequency-based lookup tables.
- Computed code-switching frequency from 57 survey responses to automate data analysis for a language research study.

Skills

Tools: TypeScript, React, Next.js, Express.js, NestJS, React Native, Expo, Astro, TailwindCSS, Python, Django, FastAPI, Supabase, PostgreSQL, Pandas, TensorFlow, PyTorch

Industry Knowledge: Web development and design, machine learning, natural language processing, data analysis

Languages: English (Professional working proficiency), Tagalog (Professional working proficiency)
